# 4sight

-Steps to clone and run project on local system

1. Setup code node code.

2. open folder
3. Make a file with the name of (**.env**)
4. file-location=4sight/frontend

```
∨ FRONTEND
  > build
  > node_modules
  > public
  > src
  ⚙ .env
  ≡ .eslintcache        M
  ◈ .gitignore
  ▪ build.zip
  {} package-lock.json
  {} package.json
  ⓘ README.md
```

5. Add this data in **.env** file
     -REACT_APP_base_url=http://3.143.208.214/dashboard/public
     - SKIP_PREFLIGHT_CHECK=true

```
.env
1   REACT_APP_base_url=http://3.143.208.214/dashboard/public
2   SKIP_PREFLIGHT_CHECK=true
3   |
```
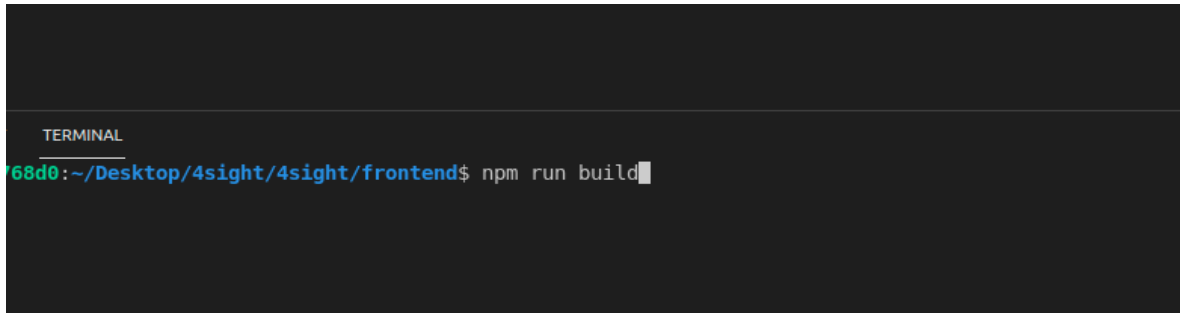

3. npm i

```
        <button
          type="button"
          className="top-togglebar bg-transparent border-0"
PUT    TERMINAL
S-768d0:~/Desktop/4sight/4sight/frontend$ npm i█
```

4. npm start

```
        </Link>
        <button
          type="button"
          className="top-togglebar bg-transparent border-0"
  OUTPUT    TERMINAL
ra-MS-768d0:~/Desktop/4sight/4sight/frontend$ npm start█
```

--**Command for making build file**

- npm run build

-build file path= frontend/build
